

Rufa 2.4 GHz SMD Antenna

Part No. A5839 / A5887

Product Specification

1 Features

- Designed for 2.4 GHz applications: Bluetooth[®], Wi-Fi[®] (802.11b/g), ZigBee[®], etc.
- Easy to integrate
- Low profile design for use with no ground beneath the antenna
- High efficiency
- Light weight
- Intended for SMD mounting
- Supplied in tape on reel

2 Description

Rufa is intended for use with all 2.4 GHz applications. The antenna uses a ground plane in order to radiate efficiently, but this ground plane must not extend underneath the antenna itself.

The antenna is available in two versions with the feed locations on the right or left hand side of the antenna.

3 Applications

- Mobile phones
- PDAs
- PNDs
- Headsets
- PMPs / MP3s
- Laptops
- PC-Cards
- Sensors

4 Part numbers

5 General data

Product name	Rufa 2.4 GHz	
Part Number	A5839 (Left)	
	A5887 (Right)	
Frequency	2.4 – 2.5 GHz	
Polarization	Linear	
Operating temperature	-40 °C to +85 °C	
Impedance with matching	50 Ω	
Weight	0.1 g	
Antenna type	SMD	
Dimensions	12.8 x 3.9 x 1.1 [mm]	

6 Electrical characteristics

_	Typical performance	Conditions
Peak gain	2.1 dBi	
Average gain	-1.2 dBi	All data measured on Antenova's reference boards,
Average efficiency	75%	part numbers A5839-U1 and A5887-U1
Maximum Return Loss	-11 dB	Data given for the 2.4 – 2.5 GHz frequency range
Maximum VSWR	1.8:1	

7 Electrical performance

7-1 Return Loss

7-2 **VSWR**

Patterns show combined polarisations measured on reference board A5839-U1

10 Electrical interface

10-1 Transmission lines

- All transmission lines should be designed to have a characteristic impedance of 50 Ω
- The length of the transmission lines should be kept to a minimum
- Any other parts of the RF system like transceivers, power amplifiers, etc, should also be designed to have an impedance of 50 Ω

Once the material for the PCB has been chosen (PCB thickness and dielectric constant), a coplanar transmission line can easily be designed using any of the commercial software packages for transmission line design. For the chosen PCB thickness, copper thickness and substrate dielectric constant, the program will calculate the appropriate transmission line width and gaps on either side of the track so the characteristic impedance of the coplanar transmission line is 50Ω .

10-2 Matching circuit

The antenna requires a matching circuit that must be optimized for each customer's product. The matching circuit will require up to three components and the following pad layout should be designed into the device so the correct circuit can be installed:

The antenna feed pad and the antenna ground pad are indicated in the drawing above. Additional pads are for mechanical attachment only and should not be grounded.

In addition to the matching circuit, a separate DC blocking capacitor will also be required between the radio and the antenna matching circuit.

Note: The component values for the matching circuit will vary depending on the size of the PCB and surrounding components. The impedance of the antenna should be measured before selecting suitable matching components. Antenova M2M offers this service on request. Contact <u>sales@antenova-m2m.com</u> for further information.

10-3 Antenna placement

Antenova M2M strongly recommends placing the antenna near the edge of the board. Maximum antenna performance is achieved by placing the antenna towards one of the corners of the PCB and with the feed point of the antenna as close to same corner of the PCB as possible.

Additional ground and components near the antenna should be at a distance of at least 2 mm. Where possible the antenna should be clear of ground from both sides, although the antenna can work well with a minimum clearance of $D \ge 2$ mm as shown in the drawing above.

10-4 Reference boards

The reference boards have been designed for evaluation purposes of Rufa 2.4 GHz and they include a SMA female connector

11 Soldering

This antenna is suitable for lead free soldering.

The reflow profile should be adjusted to suit the device, oven and solder paste, while observing the following conditions:

- The maximum temperature should not exceed 240 °C
- However for lead free soldering, a maximum temperature of 255 °C for no more than 20 seconds is permitted.
- The antenna should not be exposed to temperatures exceeding 120 °C more than 3 times during the soldering process.

12 Hazardous material regulation conformance

The antenna has been tested to conform to RoHS requirements. A certificate of conformance is available from Antenova's website.

Antennas for Wireless M2M Applications

9 Product Specification AE020157-O

13 Packaging

13-1 Optimal storage conditions for packaged reels

Temperature -10°C to 40°C		
Humidity Less than 75% RH		
Shelf Life	18 Months	
Storage place	Away from corrosive gas and direct sunlight	
Packaging	Reels should be stored in unopened sealed manufacturer's plastic packaging.	

Note: Storage of open reels of antennas is not recommended due to possible oxidization of pads on antennas. If short term storage is necessary, then it is highly recommended that the bag containing the antenna reel is re-sealed and stored in like storage conditions as in above table.
